Access Reports

CC File Hidden uses secure passwords to secure your files from strangers and other users of the computer. Access Threats are reported when a user / stranger tries to access CC File Hidden using fake passwords. A user will have 3 chances to enter the correct password of CC File Hidden. After you've used all of your chances CC File Hidden will exit and will save the Access Report as a threat. If there is an available threat record in the file system CC File Hidden will make you pay attention to the record. Access Reports include,

- The Time.
- Used password (3).
- And Accuracy Level varying from 0% to 100%.

Here's the function of all of the links and buttons in the Access Reports window,

Link or Button	Function
Help	Requests help from the CC File Hidden documentation
Change Password	Opens the password changing utility
Recovery Options	Opens the recovery options
Clear Reports	Will clear all of the access reports stored inside CC File Hidden.
