# What's new in CC File Hidden?

CC File Hidden hides your sensitive files securely and giving you the best opportunity to access them anytime without being afraid of forgetting to re-hide all of the files, because of its **Integrated File System (CC File System).** CC File Hidden recommends using Secure Passwords (which are stored on the local computer using the Ninponix Encrypted Language™) for accessing the Internal File System. Don't worry if you forgot your CC File Hidden password, **you can reset your password by answering your Security Question**. If you forgot your security answer, email [developer@ninponix.com](mailto:developer@ninponix.com) including your "Ninponix/Data" folder (**as .zip and .rar**), and your basic information (first name, middle name, last name) and retrieve your password through email. As of version 1.2, CC File Hidden supports **Trusted Devices**, which lets you access CC File Hidden without even needing a password. Just attach your **Trusted removable drive** and you're good to go (CC File Hidden won't show up the Login screen). Are you in a hurry, that you have to hide CC File Hidden as fast as possible? CC File Hidden 2016 now have a universal supporting **Emergency Hotkeys**.

Here's a quick summary of the new features in CC File Hidden 2016 (v1.2),

- Resettable Password Protection.
- Supports TrustedDevice™ Technology as "Trusted Devices".
