

Setup Instructions for eHome Infrared Receiver for PC's running under Microsoft® Windows XP Media Center Edition

These instructions work for Microsoft Windows XP Media Center Edition 2005 or higher releases only.

Setup one: Please do the following updates before installing the remote control receiver.

- Do not plug in the IR Receiver first.
- Download the Hotfix's KB912024 from the CD given as in package or from the website listed as below.
- Run the hotfix KB912024 on your PC.
- Plug in the eHome IR receiver and Windows will automatically detect and install the device.

Hotfix KB912024: Update Rollup 2 for eHome Infrared Receiver for Windows XP Media Center Edition 2005.

Found at: WindowsXP-KB912024-v2-x86-ENU in Hotfix CD, or website as given

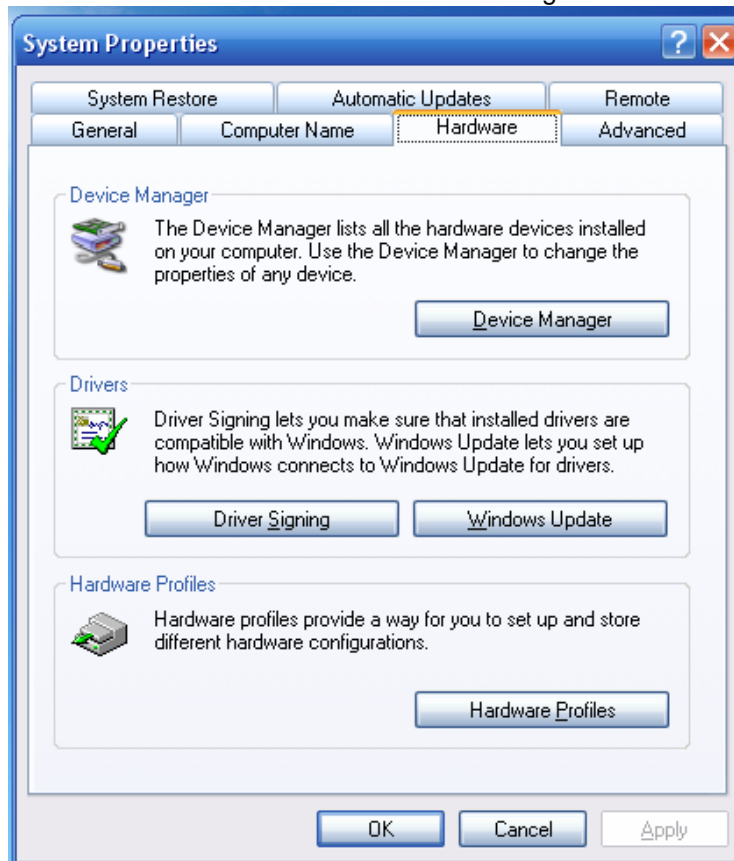

<http://www.microsoft.com/downloads/details.aspx?FamilyID=b39d53f1-0ac9-433b-b488-4cab82f31dc8&DisplayLang=en>

Setup two: If you have already plugged in the eHome IR Receiver then please do the following steps.

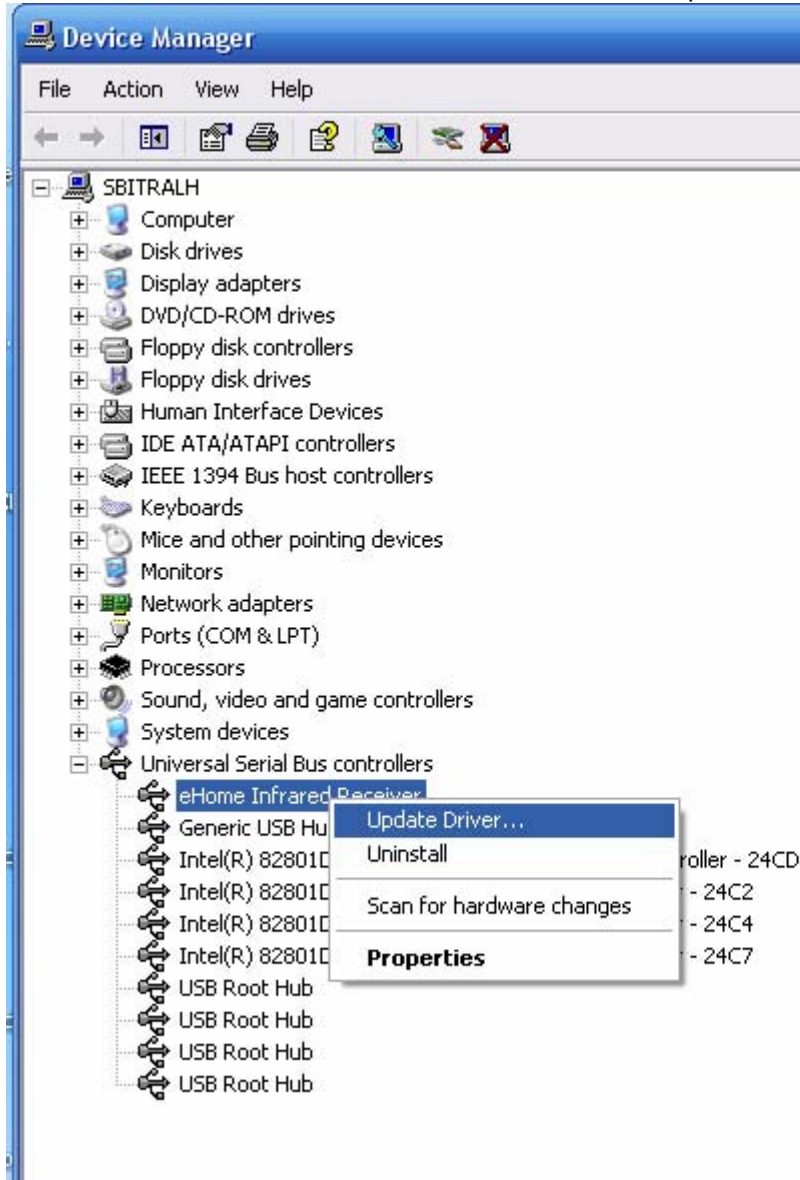

- Install the hotfix as instructed on your CD or website.
- Go to Start → My Computer → Right click → Properties and this will display the system properties window.

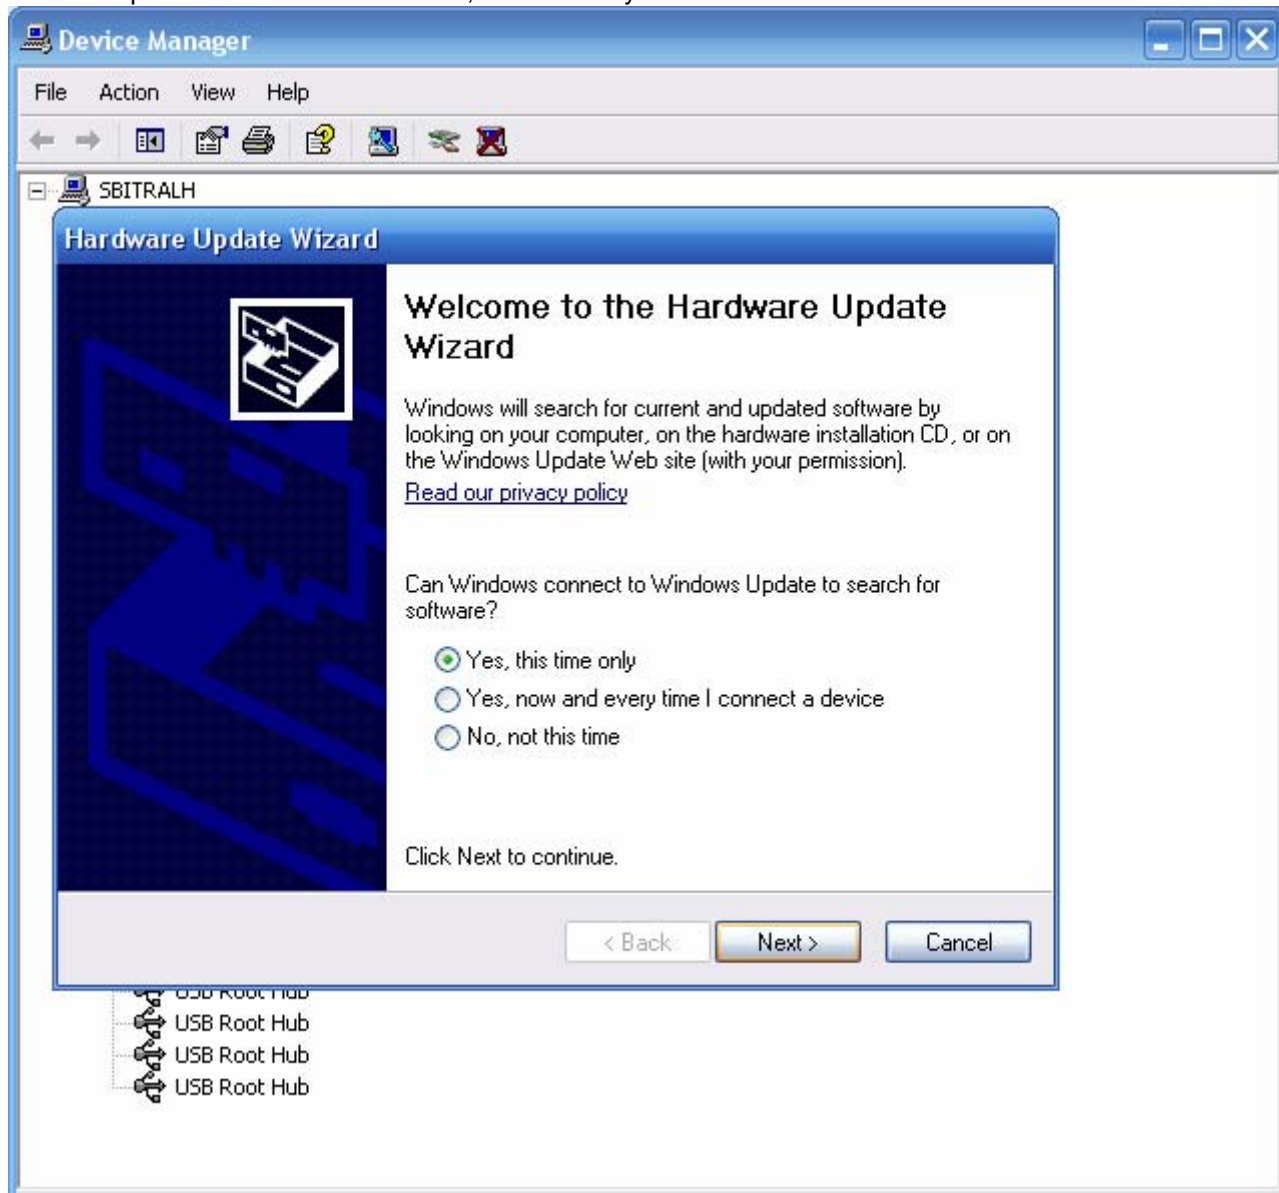

- Click on Hardware Tab and click on “Device Manager” button to show all the devices.

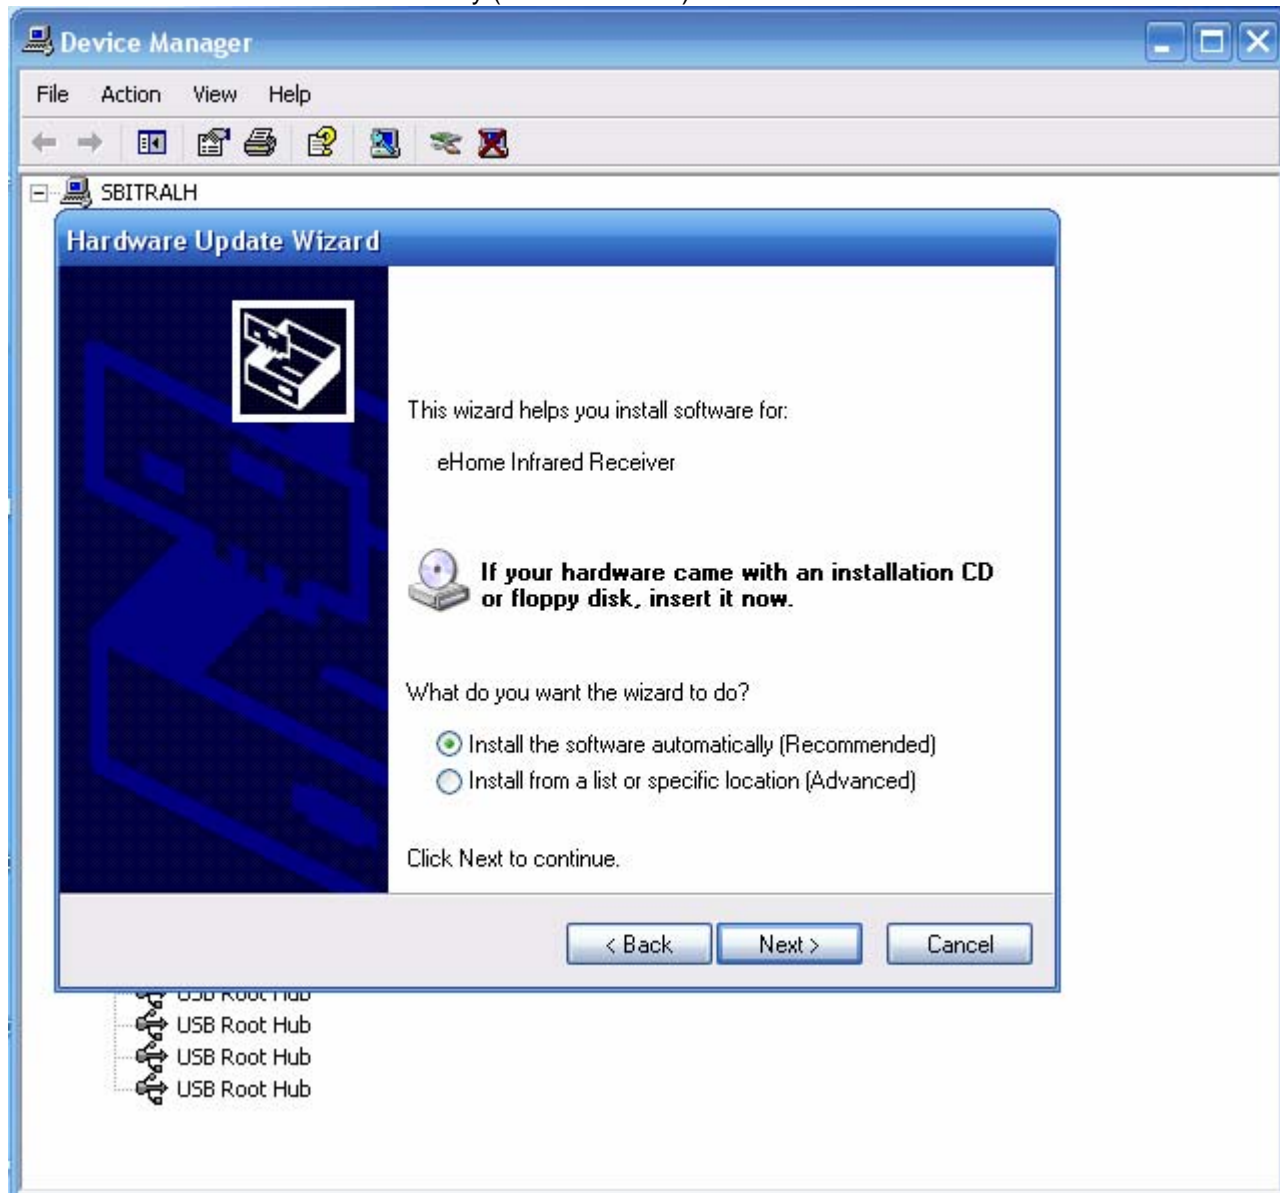

- Under the Device Manager → expand “Universal Serial Bus Controllers”.
- Right click on “eHome Infrared Receiver” item as shown in the picture.

- Click on Update Driver and select “Yes, this time only” radio button and click Next.

- Select "Install the software automatically (Recommended)"

- Click Next and proceed till the end to install the software and click "Finish" to close the wizard.
- The IR receiver should now be working after all these steps.
