

How to Use YouTube Title Scraper 1.3 From Coolmarketingsoftware.com

This software will scrape YouTube according to your keywords for the titles of the top YouTube videos according to your keywords. When looking for titles for your own videos and or articles seeing what is working so well on YouTube can give you some great ideas for your own original titles. Titles are the first words people see when searching online so having a catchy title can definitely bring you more traffic.

1. Open the program.
2. Create a text file on your hardrive and name it whatever you wish.
3. Click choose file and choose the file you just made on your hardrive.
4. If you wish to use proxies click choose proxies and choose your file of proxies on your hardrive. They should be in a format like this one per line:
ip address:port
ip address:port
5. Fill in your proxy username and password.
6. Under number of proxies put the number of proxies you are using – 1. For example if you have 16 proxies put number 15. If you have 10 proxies put 9 proxies.
7. Put your keywords where it says Keywords.
8. Put in how many YouTube search pages you want to search. I find it is best to put a maximum of 10 pages. Any more videos than this and there is not much relevance to your original keywords. There are 20 YouTube videos per page listed.
9. Click run.
10. The software will create a .csv file in the locations where you created your original file.

When the software is finished running check your file and you will see your list of YouTube titles.
